

Python Programming Questions

Question 1: Time Conversion (Seconds to Hours, Minutes and Seconds)

Write a Python program to convert a given time in seconds into hours, minutes, and seconds.

Sample Input:

Enter the time in second: 3665

Sample Output:

User Input Time : 3665 seconds

Equivalent Time : 1 hour 1 minute 5 second

Question 2: Triangle Formation Using Angles

Write a Python program to check whether three given angles can form a triangle. If a triangle is formed, determine whether it is Acute Angled, Right Angled, or Obtuse Angled.

Sample Input:

Enter the first angle (in degree): 60

Enter the second angle (in degree): 60

Enter the third angle (in degree): 60

Sample Output:

Above angles form an acute angle

Question 3: Area and Perimeter of a Triangle

Write a Python program to calculate the area and perimeter of a triangle using Heron's Formula.

Sample Input:

Enter the first side (in cm): 3

Enter the second side (in cm): 4

Enter the third side (in cm): 5

Sample Output:

The first side of the triangle is: 3 cm

The second side of the triangle is: 4 cm

The third side of the triangle is: 5 cm

Area of the triangle is: 6.0 cm²

Perimeter of the triangle is: 12 cm
